

FOR THE SPEAKER TEAM

Ready to broadcast

This guide shows you everything you need to prepare, start, and run a good broadcast with Ådience — from connecting to the mixer, to keeping good audio for your listeners throughout the event.

1. Before you start

Connect your microphone to the audio interface/mixer at the venue, and connect the interface to the computer.

Use headphones, not speakers, while broadcasting. Microphone + speakers in the same room always causes acoustic feedback (echo) — that's physics, not a bug in the app.

Open the casting tool at app.adience.no/cast and log in with the venue's stream ID and cast password (found under Media on My page).

2. Choose the right audio source

Under "Source" in the casting tool, select the audio device you're actually using (e.g. your external interface). If using a professional interface/mic (like a Shure SM7B via an Audient interface), make sure the right channel is selected — some interfaces have multiple inputs, and only one actually carries signal.

3. Start the broadcast

Choose an EQ preset — "Voice" suits speech/commentary best, "Plain" for unaltered audio. Press Start sending. The status box shows SHOWTIME once your mic is actually going out to listeners. If your venue has hold music between broadcasts, you can switch between Showtime and Waiting on the fly without disconnecting.

4. Monitor level and quality

Too low (meter barely moves): listeners will hear weak, unclear audio. Turn up the gain on the interface.

Too high (meter sits constantly in the red): audio may distort/clip. Turn down the gain, or move the mic slightly further away.

Right: the meter moves naturally with your voice, without pinning at the top.

Remember: good audio is more about the right gain level on the interface itself than app settings. Always test with a short trial broadcast before the match/event starts.

5. Say it over the PA

Remind the audience regularly that Ådience exists — say this straight into the venue's own PA system, not just on the stream. A couple of times during the match: "Did you know you can get even closer to the action? Scan the QR code around the venue and join Ådience — completely free, right in your pocket." Short, natural, repeated a couple of times.

6. Wrap-up

Press Stop sending when the event is over. That's it — no cleanup needed.

Next step — course and certification

Under My page → Speaker team you'll find the course modules: structured training in technique, audience engagement, rules, and safety, with a short question per module and your own certificate once everything's complete.

The next step from there is the physical ARENA course: a producer and a lead speaker come to you and train the team through the actual scenarios you face on matchday — filmed and evaluated together, until you can call yourselves an ARENA-certified TEAM.
